Objective

Diligent Georgia Tech Computer Engineering student with proven experience delivering enterprise-ready software. Seeking a Embedded Systems internship starting May 2027 to contribute clean, scalable code and a proactive problem-solving approach to drive impactful solutions.

Education

Georgia Institute of Technology | Atlanta, GA *January 2026 – Present*
Bachelor of Science in Computer Engineering, GPA 3.76 Expected Graduation, May 2028
Threads: Cybersecurity and Signals Information Processing

University of Georgia | Athens, GA *August 2024 – December 2025*
Transfer with 84 Credit Hours, GPA 3.95

Skills

Programming: Java, Python, React, CSS, Next.js, Node.js, HarperDB, JavaScript, Matlab
Platforms: Unix (MobaXterm)
Hardware: Arduino, oscilloscope
Software: Fusion360, GitHub, Git, Agile
Professional Organizations: Romanian Student Association
Communication: Design proposals, technical reports, instruction manuals, presentations (large and small audiences)
Languages: English (native), Romanian (native)

Experience

COX Automotive | Sandy Springs, GA *May 2026 – August 2026*
Software Engineer Intern / Autotrader
Leading provider of digital marketing, software, and e-commerce solutions for automotive dealers.

- Engineered an internal ServiceNow support ticket monitoring dashboard from initial discovery to a pilot-ready application, automating weekly on-call schedules and Slack notifications to establish unambiguous ticket ownership for the ATC VDP team.
- Engineered the TradeInCard interface and implemented backend spam filtering logic using DynamoDB, improving overall dealer lead quality and resolving a User Acceptance Test defect by architecting a fallback state that gracefully handles missing signals.

Projects

AI Fitness Assistant | Personal *July 2025*
Programmed a full-stack digital platform to scale personalized health plans, expanding access to fitness coaching.

- Integrated AI models to automate custom workout and nutrition generation across 8 personal variables and engineered a real-time conversational voice interface, eliminating manual data entry and physical screen interactions to enable user multitasking.

GlobalPhish AI| Object-Oriented Programming *December 2025*
Engineered an AI data pipeline to translate complex cybersecurity metadata into actionable advice, improving security comprehension for non-technical end users.

- Maintained platform stability and zero user interface downtime during intensive threat analysis by developing a highly concurrent data pipeline.

Relevant Coursework

Courses: Discrete Mathematics for CS, Fundamentals of Logic Design, Fundamentals of Circuit Analysis, Object-Oriented Programming, Data Structures and Algorithms, Probability and Statistics, Linear Algebra, Calculus, AI Ethics and Policy, Intro Signal Processing, Programming HW/SW System

Leadership or Activities

Romanian Student Association | Finance Officer *January 2026 – Present*

- Organized and implemented a diverse range of interactive cultural events, expanding the organization's campus footprint and increasing active member engagement.
